Need of Programming Languages

Humans cannot solve complex Problems easily as computer does. So Humans need to interact with Machines, for which Programming language is required.

Need of Translator

We write Programs in a Human readable language whereas M/c understands only 0 & 1.

So we need to convert Program to 0 & 1. And to do this we need a translator

Program

It is a set of instruction written in some Programming Language.

Note :-

i) Every Programming language must have the facility to read i/p coming from Keyboard.

ii) Every Programming language must have the facility to display output onto the screen.
